

Senior Full Stack Software Developer - Job Description

Company Summary

We are a manufacturer of state-of-the-art payment systems for self-serve laundry facilities. Our systems enable users to pay electronically for laundry machine use and facility owners/operators to benefit from real-time and remote management capabilities. We design and develop our own software and hardware, including kiosks, card readers, cloud software and apps.

We're established in the market and are growing quickly. Visit www.laundroworks.com for more information about our system.

Our office is North York, near the 401 and a 10min walk from the Glencairn subway station. You will have flexibility to work remotely.

Job Summary

We are looking for a Senior Full Stack Software Developer to join our team to help us deliver best-in-class laundry payment technology.

The developer will work collaboratively in a small team of senior developers and engineers on a variety of web and mobile projects. Our main application is a robust analytics and management tool and we also have several additional applications that we design, develop, and maintain on an ongoing basis. We constantly strive to automate our internal processes and have many new software projects on the horizon. We are also open to new ideas and initiatives to help grow our small business and scale our operations.

Required Skills and Experience

- 5 years of modern web development experience. Some PHP experience, ideally using Laravel and Vue frameworks, is strongly preferred.
- Experience with server management - i.e. deployment, configuration, identifying performance and security issues, ability to help us scale our infrastructure.
- Experience with DevOps practices and the ability to assist our team in incorporating them into our workflow.
- Strong database knowledge, with the ability to write raw complex queries, identify and resolve performance issues, and have an understanding of schema design and optimization.
- Ability to apply robust, efficient algorithms and data structures for diverse tasks and data analysis.
- Ability to design and implement simple and intuitive user interfaces.

What you get

- Benefits of working on a small team in a growing company - autonomy, large scope of responsibility, opportunity for growth, flexibility to experiment with new technologies, and have a voice for bringing new ideas to the table.
- Be a key participant in all aspects of the software development life cycle from product design, architecture, implementation and testing, to deployment and ongoing maintenance.
- Competitive salary with discretionary bonuses
- Health spending account
- Paid vacation

Application Process

Please email your application to careers@laundroworks.com.

All interviews will be held remotely.

- 15-30 minute screening
- Take home practical project
- 1-1.5 hour interview
